

CLAIMS

What is claimed is:

Sub E1  
D1

1. (THREE TIMES AMENDED) An apparatus comprising:  
a browsing mechanism configured to render a current data resource in a display region of a graphical user interface, said current data resource comprising at least one current document, said browsing mechanism configured to navigate through a plurality of data resources;  
a selection mechanism configured to select a portion of said current document in response to a user input;  
an attachment mechanism configured to retrieve an attachment from said selection mechanism and attach said attachment to an e-mail message in response to a user event, said attachment associated with said portion of said current document.

D2

2. (ONCE AMENDED) The apparatus of claim 1, wherein said attachment comprises a resource locator associated with said current document.

3. (ONCE AMENDED) The apparatus of claim 1, wherein said attachment comprises source data associated with said current document.

Sub E2

4. (UNCHANGED) The apparatus of claim 1 wherein said attachment mechanism is configured to select an attachment type of said attachment.

5. (UNCHANGED) The apparatus of claim 1, wherein said attachment mechanism comprises a button on said graphical user interface.

6. (UNCHANGED) The apparatus of claim 1, wherein said browsing mechanism is configured to navigate to a first data resource using a resource locator in a second data resource.

---

7. (THREE TIMES AMENDED) A method for selecting attachments comprising:

D<sup>3</sup> displaying a graphical user interface having a browsing mechanism configured to render a data resource and having a selecting mechanism configured to select a portion of a desired data resource;

browsing through one or more data resources using said browsing mechanism to determine a desired data resource, said desired data resource comprising at least one current document;

selecting said portion of said current document using said selecting mechanism; and

retrieving an attachment from said selecting mechanism and attaching said attachment to an e-mail message, said attachment associated with said portion of said current document.

---

Sub E3 8. (UNCHANGED) The method of claim 7 further comprising the step of selecting a type of said attachment.

---

D<sup>4</sup> 9. (ONCE AMENDED) The method of claim 7 wherein said step of retrieving said attachment comprises retrieving a resource locator of said current document.

---

E3  
10. (ONCE AMENDED) The method of claim 7 wherein said step of retrieving said attachment comprises retrieving source data associated with said current document.

11. (ONCE AMENDED) The method of claim 7, wherein said step of browsing comprises the step of navigating a resource locator in said documents.

12. (THREE TIMES AMENDED) A computer program product comprising:

a computer usable medium having computer readable code embodied therein for selecting an attachment, said computer program product comprising:

computer readable code configured to cause a computer to display a graphical user interface having a browsing mechanism configured to render a data resource and having a selecting mechanism configured to select a portion of said data resource;

computer readable code configured to cause a computer to respond to user input to browse through one or more data resources using said browsing mechanism, said data resources comprising at least one current document;

computer readable code configured to cause a computer to respond to user input to select said portion of said current document using said selecting mechanism; and

computer readable code configured to cause a computer to retrieve an attachment from said selecting mechanism and attach said attachment to an e-mail message, said attachment associated with a current document.

Sub  
E4

Serial No.: 09/046,784

13. (UNCHANGED) The computer program product of claim 12 further comprising computer readable code configured to cause a computer to receive user input to select a type of said attachment.

14. (ONCE AMENDED) The computer program product of claim 12 wherein said computer readable code configured to cause a computer to retrieve said attachment comprises computer readable code configured to cause a computer to retrieve a resource locator of said current document.

15. (ONCE AMENDED) The computer program product of claim 12 wherein said computer readable code configured to cause a computer to retrieve said attachment comprises computer readable code configured to cause a computer to retrieve source data associated with said current document.

16. (ONCE AMENDED) The computer program product of claim 12, wherein said computer readable code configured to cause a computer to respond to user input to browse comprises computer readable code configured to cause a computer to navigate a resource locator in said documents.

Sub  
E5

17. (THREE TIMES AMENDED) A memory configured to store data for access by a computer system, comprising:

a data structure stored in said memory and associated with a graphical user interface, said data structure comprising:

a browsing component comprising:

one or more methods configured to render a current data resource, said current data resource comprising at least one current document;

Es

one or more navigation methods configured to navigate  
between a plurality of data resources;

one or more navigation components configured to invoke said one  
or more navigation methods of said browsing component in response to  
user input; and

D7

one or more selecting components configured to select a portion of  
said current document in response to a user input; and

an attachment component comprising a method configured to  
retrieve an attachment from said selecting component and attach said  
attachment to an e-mail message in response to a user input, said  
attachment associated with said current document.

18

18. (ONCE AMENDED) The memory of claim 17, wherein said  
attachment comprises a resource locator of said current document.

19. (ONCE AMENDED) The memory of claim 17, wherein said  
attachment comprises source data associated with said current document.

20. (UNCHANGED) The memory of claim 17, wherein said data  
structure further comprises:

a property which determines a type of said attachment; and

a selection method configured to allow a user to select a value of said  
property.

21. (UNCHANGED) The memory of claim 17, wherein said one or  
more navigation methods are configured to navigate a resource locator in a data  
resource in response to a user input.

Sub  
E6

22. (UNCHANGED) The memory of claim 17, wherein said browsing component further comprises:

a stack configured to contain resource locators of navigated data resources;

one or more methods configured to browse said navigated data resources by stepping forward and backward within said stack.

23. (THREE TIMES AMENDED) An apparatus comprising:

a browsing means for rendering a current data resource in a display region of a graphical user interface, said current data resource comprising at least one current document, said browsing means for navigating through a plurality of data resources;

means for selecting a portion of said current document in response to user input; and

means for retrieving an attachment from said selecting means and attaching said attachment to an e-mail message in response to a user event, said attachment associated with said current document.
